WHEN IN ROME . . .

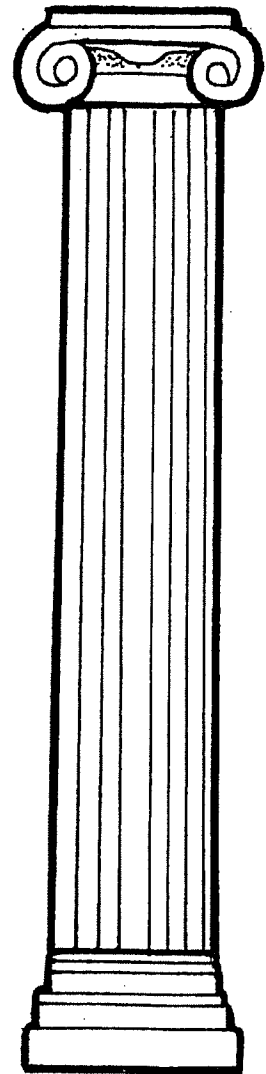

The Roman Numeral System does not have place value, but order matters. No symbol is used more than three times. You add the values of the symbols. However, when a symbol for a smaller number is to the left of another symbol, you subtract.

SYMBOL	VALUE
I	1
V	5
X	10
L	50
C	100
D	500
M	1,000
—	x by 1,000

Examples: XVI = 16 (10 + 5 + 1)
 XC = 90 (100 - 10)
 XXIV = 24 (10 + 10 + 5 - 1)
 \overline{V} = 5,000 (5 x 1,000)
 \overline{C} = 100,000 (100 x 1,000)

Match each Roman Numeral or problem to its value. Then place the letter of the problem above its number at the bottom of the page.
